# Cortada Projects

# Plan

EcoArt by Xavier Cortada

Plan(T) is a participatory eco-art project aimed at helping our local community learn about and plan for a future impacted by global climate change.

Rising seas and saltwater intrusion into our freshwater aquifers are threatening to permanently alter our way of life in South Florida.

Our "mangrove in every yard" reforestation effort focuses on raising awareness and building community.

Residents are encouraged to plant a mangrove seedling in their yards to facilitate climate conversations, help sequester carbon dioxide, and grow our salt-tolerant native tree canopy.

By planting for a future with saltwater-intrusion, local residents can begin planning for the effects that climate change will bring to Miami.
