Table of Contents

Figure List

Table List

1. Throughput Concepts

1.1 Introduction to Throughput

1.1.1. Role of Throughput on Business Success

1.1.2. Manufacturing Throughput Performance

1.2 Discussion of Manufacturing Throughput

1.2.1. Characteristics of Manufacturing Throughput

1.2.2. Time Analysis in Manufacturing Operations

1.3 Characteristics of Manufacturing Systems

1.3.1. Overview of Manufacturing Process Types

1.3.2. Settings of Manufacturing System

1.3.3. Additional Throughput Considerations

1.4 Operational States of Production

- 1.4.1. Operational States of Systems
- 1.4.2. Applications of Standalone State

Chapter Summary

Exercise and Review

References

2. System Performance Metrics

2.1 Performance Measurement

- 2.1.1. Direct Throughput Indicators
- 2.1.2. KPIs of Operations
- 2.1.3. Review of ISO 22400 KPIs

2.2 Manufacturing System OEE

- 2.2.1. Three Major Metrics
- 2.2.2. Introduction to OEE
- 2.2.3. OEE Studies

2.3 Considerations on OEE

- 2.3.1. Weighting in OEE
- 2.3.2. Standalone OEE
- 2.3.3. OEE Extensions

2.4 Further Discussion of KPIs

- 2.4.1. KPI Selection
- 2.4.2. Considerations in KPIs
- 2.4.3. Financial Implications of KPIs

Chapter Summary

Exercise and Review

References

3. Bottleneck Identification and Buffer Analysis

3.1 Understanding of Bottleneck

- 3.1.1. System Bottleneck
- 3.1.2. Classification of Bottleneck

- 3.2 Bottleneck Identification
 - 3.2.1. Identification using Individual KPI
 - 3.2.2. Identification using Multiple KPIs
 - 3.2.3. Research on Bottleneck
- 3.3 Understanding of System Buffer
 - 3.3.1. Buffer Effect of Conveyor
 - 3.3.2. Buffer Effect Analysis
- 3.4 Buffer Analysis for Bottleneck Identification
 - 3.4.1. Considerations in Buffer Analysis
 - 3.4.2. Analysis of Buffer Status

Chapter Summary

Exercise and Review

References

4. Quality Management and Throughput

- 4.1 Quality Management
 - 4.1.1. Understanding of Quality
 - 4.1.2. Quality Management System
- 4.2 Cost Analysis of Quality
 - 4.2.1. Categories of Quality Costs
 - 4.2.2. Discussion on Quality Costs
 - 4.2.3. Project Economic Evaluation
- 4.3 Quality in Production Throughput
 - 4.3.1. Quality Contribution to Throughput
 - 4.3.2. Quality Analysis of Serial and Parallel Operations
- 4.4 Discussion of Improving Quality
 - 4.4.1. Quality Appraisals
 - 4.4.2. Quality Improvement Tools

Chapter Summary

Exercise and Review

References

5. Maintenance Management and Throughput

5.1 Maintenance Principles

5.1.1. Reliability Principles

5.1.2. MTBF and MTTR

5.1.3. Role of Maintenance in System Throughput

5.2 Equipment Maintenance Strategies

5.2.1. Overall Maintenance Management

5.2.2. Reliability Centered Maintenance

5.3 Maintenance Performance Management

5.3.1. Key Aspects of Maintenance

5.3.2. Measuring Maintenance Quality

5.4 Consideration and Analysis in Maintenance

5.4.1. Risk and Effect Considerations

5.4.2. Analysis of Maintenance Costs

5.4.3. Additional Considerations in Maintenance

Chapter Summary

Exercise and Review

References

6. Throughput Enhancement Methodology

6.1 Approaches for Solving and Improving

6.1.1. Overview of Problem Solving and Continuous Improvement

6.1.2. Common Approaches

6.2 Core Process for Throughput Enhancement

6.2.1. Throughput Enhancement Essentials

6.2.2. Bottlenecks and Root Causes

6.2.3. Variation Management in Throughput

6.3 Particular Throughput Analysis

6.3.1. Downtime Analysis

6.3.2. Cycle Time Analysis

6.3.3. Human Factors Consideration

6.4 Project Proposal Management

6.4.1. Proposal Development

6.4.2. Simple Proposal Approaches

6.4.3. Proposal Review

Chapter Summary

Exercise and Review

References

7. Analysis and Design for Operational Availability

7.1 Introduction to System Design

7.1.1. System Design Overview

7.1.2. Discussion of System Design

7.1.3. Design Approaches

7.2 Throughput Considerations in Design

7.2.1. Review of Throughput Rates

7.2.2. Throughput Focus in Design

7.2.3. Throughput-focused FMEA

7.3 Reliability-based System Design

7.3.1. System Reliability

7.3.2. Reliability of Serial Systems

7.3.3. Reliability of Parallel Systems

7.4 Additional Considerations in System Reliability

7.4.1. Relative Reliability Importance

7.4.2. Reliability Reinforcement

7.4.3. Validation Tests

Chapter Summary

Exercise and Review

References

8. System Design for Throughput Assurance

8.1 Buffer Planning for Throughput

8.1.1. Buffer Allocation Planning

- 8.1.2. Buffer Path Design
- 8.2 Analysis of Buffer Design
 - 8.2.1. Buffer Effect Estimation
 - 8.2.2. Total Cost Analysis
 - 8.2.3. Research Perspectives
- 8.3 Throughput Capability Design
 - 8.3.1. Cycle Time Design Considerations
 - 8.3.2. Throughput Capability Balance
- 8.4 Additional Considerations
 - 8.4.1. Value Creation and Throughput
 - 8.4.2. Additional Key Aspects
 - 8.4.3. Discrete Event Simulation
 - 8.4.4. Advancing Manufacturing with Research
- Chapter Summary
- Exercise and Review
- References

Appendix A – Manufacturing KPIs

Appendix B – Acronyms, Abbreviations, and Notations

Appendix C – Answers to Exercises
